

UI FIX: Order Ticket Page – Font Size, Density, and Layout

PROBLEM: The order ticket page is way too spread out. It takes 4 full phone screenshots to see one order. The font was recently increased and it now looks magnified. There is excessive padding and dead space everywhere. Compare it to the options chain page which is compact and scannable. The order ticket should have similar density.

REFERENCE FONT SIZE: The text inside the risk card checklist items (Pulse Alignment, Risk/Reward, Liquidity, Position Size, Vol Environment, DTE/Gamma Risk, Leg Alignment) is the correct size. Use that as the baseline for the entire page. The label text (like "Pulse Alignment") and the detail text (like "TRANSITION / NO_EDGE") are both good sizes. Match the rest of the page to this.

SPECIFIC FIXES:

1. **GLOBAL FONT REDUCTION** Reduce the base font size across the entire order ticket page to match the risk card checklist text. Right now the ticker header, the naked position warning, the legs, the order inputs, and the summary bar are all oversized compared to the checklist. Bring everything into alignment with that checklist size. Section headers like "RISK OVERVIEW", "LEGS", "ORDER" can be slightly larger for hierarchy but not by much.
2. **TICKER HEADER** The INTC block at the top (ticker, price, change, expiration, Schwab badge) has no visual hierarchy and wastes a full card's worth of space. Compress this into a single dense row. Ticker should be bold and yellow (or whatever the accent color is). Price and change next to it. Expiration and source (Schwab) on the same line, smaller. This should be one row, not a full card with padding.
3. **NAKED POSITION WARNING** Currently a multi-line yellow/red paragraph that takes up massive space. Restyle as a compact red banner: bright red background, black or white text, one or two lines max. Something like: "WARNING: Naked short position. Undefined risk. Add a protective leg to define risk." Keep it impossible to miss but do not let it consume half the screen. If the current text is wrapping to 4+ lines, the font is too big or the text is too verbose. Tighten the copy and reduce the font to match the checklist baseline.
4. **RISK OVERVIEW CARD** Currently shows: Max loss, POP, Margin in a row, then "View full risk details / Tap to collapse", then the full P/L chart, then greeks (Delta, Gamma, Theta, Vega), then the full checklist, then AI co-pilot tips. This is too much content expanded by default.

Fix: Make the risk card collapsible and COLLAPSED by default. When collapsed, show only

the summary row: Max loss, POP, Margin, and the Pre-trade risk badge (PASS/FAIL). One row. When expanded (user taps to expand), show the P/L chart, greeks, checklist, and AI co-pilot. This alone will cut one full screenshot off the page length.

5. P/L CHART The chart takes up too much vertical space. Reduce its height by about 30-40%. It does not need to be as tall as it currently is. The shape communicates the risk profile, it does not need to be billboard sized.
6. GREEKS (Delta, Gamma, Theta, Vega) Currently displayed as a 2x2 grid with generous spacing. Compress into a single horizontal row: "D 0.825 | G -0.058 | T 0.176 | V -0.134". Use abbreviated labels. This should be one line, not four.
7. LEGS SECTION The legs are correctly structured but have too much vertical padding between them. Tighten the gap between Leg 1 and Leg 2. Each leg should be a compact row showing: action (OPEN), quantity and type (-1 59 Put), expiration, bid/ask, mark. The Edit and delete buttons are fine. Just reduce the vertical padding between legs and within each leg.
8. ORDER SECTION (Limit, TIF, Price, Quantity) The input fields and labels are oversized. Reduce to match the baseline font. The price display (Bid / Mid / Ask row) is good info but the font is too large. The quantity stepper is fine functionally but takes up too much vertical space.
9. BOTTOM SUMMARY BAR "1 spread - Credit \$907.00 - Max risk - - POP 18% - Risk: FAIL" is good info. Keep it. Make sure the font matches the baseline. This bar should be sticky at the bottom above the REVIEW OPTIONS ORDER button.
10. GENERAL SPACING Go through every card, row, and section and reduce vertical padding by approximately 30-40%. The current padding is appropriate for a tablet layout, not a phone. Reference the options chain page for appropriate spacing between rows and within cards.

DO NOT CHANGE:

- The REVIEW OPTIONS ORDER button at the bottom (size and style is fine)
- The color coding system (red for warnings, green for passing checks, yellow for caution)
- The Options/Stock toggle at the top
- The Strategies/Leg builder tab selector
- The content or logic of any of the risk checks or AI co-pilot tips

GOAL: The entire order ticket should fit in 2 screenshots max, not 4. The user should be able to see the legs, the price, the risk summary, and the submit button without excessive

scrolling. Density should be close to the options chain page.
